

Icos Gold is a protection against shop-lifting that is easily applied to jewellery and watches. Icos Gold allows the showing, the wearing and the sale of the jewels safely. Nevermore a mistake or a moment of carelessness will turn into a jugglery theft!

Icos Gold is produced in valuable plastic material, in an elegant design that exalts the beauty of the item. It can be customized with a logo and, thanks to the high quality of the components, is reusable. The application is very simple, as a normal guarantee seal, you just knot it to the item to protect it; you remove it at the moment of the sale.

The knotted Icos Gold to the jewel does not disturb wearing and appreciating design and details of the jewel itself. Its roundish and minute form allows the lodging of the protected items in rolls.

Icos Gold is available with :

- Acoustic-magnetic not disactivable
- Radio frequency 8,2 Mhz.

The theft won't be familiar anymore in your commercial reality combining Icos Gold to the installation at the entrance of your shop, your stand or your showroom of one or more barriers with Acoustic-magnetic or Radio frequency.
